

## About the Company

This Company specializes in managing perishable goods through advanced warehousing solutions. Their system ensures real-time visibility, streamlines order processing, and coordinates efficient shipments within cold storage environments. With a focus on compliance, safety, and scalability, they offer a comprehensive solution tailored to dynamic industry requirements.

## The Problem Statement

Cold storage facilities struggle with efficiently managing perishable goods due to challenges like maintaining precise temperature control and ensuring product quality. Traditional systems lack real-time visibility, leading to inventory inaccuracies and delayed processing.

## The Challenge

Developing a solution requires overcoming hurdles such as consistent temperature control, accurate inventory tracking, and efficient order processing. Integration with existing infrastructure and compliance with food safety regulations further complicates the process.

## The Solution

Spiralogics offers a tailored solution that provides real-time visibility, streamlines workflows, and ensures compliance. With features like temperature monitoring and user-friendly interfaces, their system optimizes operations, meeting industry demands effectively.

## Tech Stack

The tech stack for Agile Cold Storage includes SQL Server for database management, HTML and CSS for frontend development, C#, .NET Core, and Blazor for backend and application development.
