

About the Company

This company is a global provider of temperature-controlled warehousing and logistics solutions for perishable goods. It operates a vast network of facilities worldwide, offering services such as refrigerated storage, transportation, and supply chain management. Americold plays a crucial role in preserving the quality and safety of perishable products as they move through the supply chain, with a focus on sustainability and efficiency.

The Problem Statement

The organization struggles with seamlessly managing and integrating multiple applications, including WMS, EDI, database administration, report administration, import container scheduling system, and technical documentation.

The Challenge

Lack of integration hindered operational efficiency by creating difficulties in accessing and sharing information across different systems. As a result, the organization faced increased maintenance overheads due to inefficiencies in workflow management. These challenges prevented the organization from optimizing its technological infrastructure and achieving overall operational effectiveness.

The Solution

Spiralogics offers tailored solutions to address challenges related to managing and integrating multiple applications. These solutions include developing a robust integration framework to connect disparate systems, building custom applications or modules to bridge gaps between existing systems, creating APIs for facilitating communication and data exchange, implementing tools and strategies for data migration and synchronization, providing ongoing support for application upgrades and maintenance.

Tech Stack

Spiralogics' versatile tech stack includes Visual Basic, VB.NET, ASP.NET, PHP, MySQL, Microsoft SQL, Crystal Reports, C++, and more, enabling them to develop a wide range of software solutions tailored to client needs.
