

About the Company

This client is a specialty risk transfer and care coordination company focused on complex, catastrophic cases in workers' compensation and general insurance. They provide innovative solutions to manage the quality and cost of healthcare for injured workers, integrating predictive analytics, clinical expertise, and technology to improve outcomes and reduce costs for both payers and patients.

The Problem Statement

Navigating the landscape of high-cost, catastrophic, and complex medical cases present a multifaceted challenge for insurers, employers, and healthcare providers. Addressing these complexities requires a collaborative effort among stakeholders to develop and implement personalized care solutions, thereby overcoming the barriers to efficient management and optimal outcomes.

The Challenge

The absence of a comprehensive approach integrating case management, field management, and implants negotiation systems leads to fragmented care delivery, inflated costs, and suboptimal outcomes. A pressing demand existed for a customized solution that delivers personalized care, effectively managing these complex cases while containing costs and enhancing outcomes.

The Solution

Spiralogics develops customized software solutions to address the specific needs of clients managing high-cost, catastrophic, and complex medical cases. These solutions encompass comprehensive case management, field management, and implants negotiation systems, providing efficient and tailored support. By leveraging advanced technology and collaborating closely with insurers, employers, and healthcare providers, Spiralogics delivers software that optimizes care delivery, enhances outcomes, and manages costs effectively.

Tech Stack

This tech stack comprises .NET Core for backend development, ReactJS for frontend user interface, and MSSQL for Database Management.
